

I. Amendments to the Claims.

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of claims:

Claim 1 (Cancelled)

Claim 2 (Previously Presented) A communication terminal comprising
a display unit which displays an original selection screen for selecting at least one
of a plurality of options;

display control means which causes display of options in said unit; and
a key for selecting an option not currently displayed on said display unit from the
plurality of options;

said display control means causing, when an option not currently displayed has
been selected, display of a screen associated with said selected option on said display unit and
causing display of said selected option in reverse when displaying said original selection screen
next by operating another hardware key.

Claim 3. (Previously Presented) A communication terminal according to Claim
2, wherein said display control means comprises display control structure.

Claim 4. (Previously Presented) A communication terminal according to Claim
3, wherein said display control structure causes a display of the selected option by division.

Claim 5. (Previously Presented) A communication terminal according to Claim 3, wherein said display control structure causes a display of the selected option by scroll.

Claim 6. (Previously Presented) A communication terminal according to Claim 3, wherein said display control structure causes a display of a selected option word in reverse.

Claim 7. (Previously Presented) A communication terminal according to Claim 3, wherein said display control structure causes, in response to activation of a clear key after the display of the screen associated with the selected option, a display of an original selection screen that includes the selected option in reverse.

Claim 8. (Previously Presented) A communication terminal according to Claim 3, wherein said display control structure, in response to a hardware key selecting an upper layer option not currently displayed on said original selection screen, causes an immediate display of a plurality of lower layer options corresponding to the selected upper layer option.

Claim 9. (Previously Presented) A communication terminal according to Claim 3, wherein said key for selecting an option not currently displayed comprises an alphanumeric key.

Claim 10. (Previously Presented) A communication terminal according to Claim 3, wherein said display control structure causes said original display screen to display less than

seven options, and wherein said display control structure causes, in response to activation of the 7 key while said original selection screen is displayed, display on said display unit of a plurality of information associated with a seventh option not displayed on the original selection screen.

Claim 11. (Previously Presented) A communication terminal according to Claim 10, wherein said display control structure causes, in response to activation of the 7 key while said original selection screen displays a plurality of upper layer options, display on said display unit of a plurality of lower layer options associated with a seventh option.

Claim 12. (Previously Presented) A communication terminal according to Claim 10, wherein said display control structure causes, in response to selection of a clear key while said display unit displays the plurality of information associated with a seventh option, display of an original selection screen including the seventh option.

Claims 13-22 (Cancelled)

Claim 23. (New) A communication terminal comprising
a display unit which displays an original selection screen for selecting at least one of a plurality of options;
display control means which causes display of options in said unit by scroll; and
a key for selecting an option not currently displayed on said display unit from the plurality of options;

said display control means causing, when an option not currently displayed has been selected, display of a screen associated with said selected option on said display unit and causing display of said selected option in reverse when displaying said original selection screen next by operating another hardware key.

Claim 24. (New) A communication terminal according to Claim 23, wherein said display control means comprises display control structure.

Claim 25. (New) A communication terminal according to Claim 24, wherein said display control structure causes a display of a selected option word in reverse.

Claim 26. (New) A communication terminal according to Claim 24, wherein said display control structure causes, in response to activation of a clear key after the display of the screen associated with the selected option, a display of an original selection screen that includes the selected option in reverse.

Claim 27. (New) A communication terminal according to Claim 24, wherein said display control structure, in response to a hardware key selecting an upper layer option not currently displayed on said original selection screen, causes an immediate display of a plurality of lower layer options corresponding to the selected upper layer option.

Claim 28. (New) A communication terminal according to Claim 24, wherein said key for selecting an option not currently displayed comprises an alphanumeric key.

Claim 29. (New) A communication terminal according to Claim 24, wherein said display control structure causes said original display screen to display less than seven options, and wherein said display control structure causes, in response to activation of the 7 key while said original selection screen is displayed, display on said display unit of a plurality of information associated with a seventh option not displayed on the original selection screen.

Claim 30. (New) A communication terminal according to Claim 31, wherein said display control structure causes, in response to activation of the 7 key while said original selection screen displays a plurality of upper layer options, display on said display unit of a plurality of lower layer options associated with a seventh option.

Claim 31. (New) A communication terminal according to Claim 31, wherein said display control structure causes, in response to selection of a clear key while said display unit displays the plurality of information associated with a seventh option, display of an original selection screen including the seventh option.

Claim 32. (New) A communication terminal comprising
a display unit which displays an original selection screen for selecting from
among a plurality of upper layer options;
display control structure which causes display of upper layer options and lower
layer options on in said display unit; and
a hardware key for selecting an upper layer option not currently displayed on said
display unit;

said display control structure causing, when an upper layer option not currently displayed has been selected by said hardware key, (i) display on said display unit of a screen associated with said selected upper layer option, and (ii) display of said selected upper layer option in reverse when next displaying said original selection screen.
